

Siddharth Nagar, Narayanavanam Road — 517583

QUESTION BANK (DESCRIPTIVE)

Subject with Code : Concrete Technology (16CE118) Course & Branch: B.Tech - CE

Year & Sem: III B.Tech & I Sem **Regulation:** R16

UNIT –I

1.	What are Bouge's compounds? Explain in detail how each one of these compounds influen	nces the
	strength and setting properties of cement.	10M
2.	a. Explain heat of hydration and hydration process of cement in detail.	5M
	b. Explain setting time of cement and factors effecting setting time of cement.	5M
3.	a. Discuss the chemical composition of Ordinary Portland cement.	5M
	b. Briefly explain different types of cement.	5M
4.	a. Explain the term super plasticizers. How are they useful in concrete production?	5M
	b. Explain the advantages of using plasticizers and super plasticizers in concrete making.	5M
5.	a. Discuss the difference between the wet and dry process of manufacturing of Portland cem	ent. 5M
	b. Draw the flow diagrams for wet and dry process of manufacture of cement and explain th	e same.
		5M
6.	Define the term "Bulking of aggregates". Explain its significance with reference to concrete	making.
	Explain the simple field test to determine the bulking of aggregates.	5M
7.	a. What do you mean by soundness of aggregate?	5M
	b. What is alkali-aggregate reaction? And how will it affect the concrete properties.	5M
8.	a. How do you conduct sieve analysis on coarse aggregate in laboratory?	5M
	b. Differentiate between gap grading and well grading of aggregates.	5M
8.	a. Bring out the detailed classification of aggregates and explain each one of them briefly	5M
	b. Explain different methods of measurement of moisture content of aggregates.	5M
10	a. What is the function of gypsum in the manufacture of cement?	2M
	b. What is Sulphate attack?	2M
	c. What are pozzolonas?	2M
	d. What is known as clinker?	2M
	e. Difference between quick setting and rapid hardening cement.	2M

Siddharth Nagar, Narayanavanam Road — 517583

Subject with Code : Concrete Technology (16CE118) Course & Branch: B.Tech - CE

Year & Sem: III B.Tech & I Sem **Regulation:** R16

<u>UNIT –II</u>

1.	Explain in detail the slump test with the help of a neat sketch. Discuss its merits and limitation	ns. 10M
2.	a. What do you understand by the term "Workability"?	5M
	b. Discuss the various factors affecting the workability of concrete.	5M
3.	Explain the following with reference to the properties of fresh concrete.	10M
	a. Segregation b. Bleeding.	
4.	Explain about different methods to measure workability of concrete?	10M
5.	Briefly explain manufacturing procedure of concrete.	10M
6.	a. Explain the phenomenon of gain of strength of concrete with age.	5M
	b. Calculate the Gel/space ratio and the theoretical strength of a sample of concrete made w	ith 500
	gms of cement and 0.6 w/c ratio, on Full hydration and 70% hydration.	5M
7.	Explain the various factors affecting strength of hardened concrete.	10M
8.	a. Explain the Maturity concept for strength development of concrete.	5M
	b. Explain the relation between compression strength and tensile strength of concrete.	5M
9.	a. Explain different methods of placing concrete.	5M
	b. Explain different methods of curing procedure.	5M
10	. a. Define bleeding.	2M
	b. Define Segregation.	2M
	c. Define workability.	2M
	d. List the different factors affecting workability.	2M
	e. Write different mechanical properties of concrete.	2M

Siddharth Nagar, Narayanavanam Road — 517583

QUESTION BANK (DESCRIPTIVE)

Subject with Code : Concrete Technology (16CE118) Course & Branch: B.Tech - CE

Year & Sem: III B.Tech & I Sem **Regulation:** R16

UNIT -III

	<u>UNII –III</u>	
1.	a. Explain Schmidt's Rebound Hammer test and the limitations and applications of the same.	5M
	b. Explain the various pulse velocity methods and the techniques measuring the pulse v	elocity
	through concrete.	5M
2.	a. What are the various factors affecting the compressive strength of concrete?	5M
	b. Explain in detail about the rebound hammer test (NDT) that is conducted on existing structure of the stru	cture to
	assess its strength with a neat diagram.	5M
3.	Explain Creep of concrete and relation between creep and time.	10M
4.	a. How the shrinkage of concrete is classified and explain each one of them briefly?	5M
	b. Explain the procedure to conduct Modulus of elasticity test in the laboratory and explain	ain the
	various factors affecting the modulus of elasticity.	5M
5.	a. Draw the typical stress-strain curve of concrete and explain the various modulus of elasticity	ty. 5M
	b. Draw the stress-strain curves for aggregate, cement paste and concrete and explain the be-	ehavior
	for each of them.	5M
6.	a. What is shrinkage of concrete?	5M
	b. Explain the various factors affecting shrinkage of concrete.	5M
7.	a. What are the factors that affect the creep and shrinkage of concrete?	5M
	b. How does strength of concrete influence the modulus of elasticity and Poisson's ratio of con-	
8.	Explain the procedure for UPV and Rebound hammer test.	5M 10M
9.	Explain detail about NDT.	10M
10.	a. List out the factors affecting the results of strength test.	2M
	b. Define Creep.	2M
	c. Define Shrinkage.	2M
	d. List out different tests in NDT.	2M
	e. Define Dynamic modulus of Elasticity.	2M

Siddharth Nagar, Narayanavanam Road – 517583

QUESTION BANK (DESCRIPTIVE)

Subject with Code : Concrete Technology (16CE118) Course & Branch: B.Tech - CE

Year & Sem: III B.Tech & I Sem **Regulation:** R16

UNIT -IV

1. Design a concrete mix of M20 grade for a roof slab. Take a standard deviation of 4MPa. The specific gravities of Coarse Aggregate and Fine Aggregate are 2.67 and 2.73 respectively. The bulk density of coarse aggregate is 16020 Kg/m³ and Fineness Modulus of Fine Aggregate is 2.76. A slump of 50mm is necessary. The water absorption of coarse aggregate is 1% and free moisture in fine aggregate is 3%. Design the concrete mix using ACI method. Assume any missing data suitably.

10M

2. Explain the mix design procedure of concrete as per ACI code Method.

10M

3. Design a M35 concrete mix using IS method of Mix Design for the following data:

10M

1) Maximum size of aggregate - 20mm (Angular)

2) Degree of workability - 0.90 compaction factor.

3) Quality control - good 4) Type of exposure - mild

5) Specific Gravity A. Cement - 3.12 (B. Sand - 2.63 (C. Coarse aggregate - 2.66

6) Water absorption: A. Coarse aggregate - 0.5% (B. Fine aggregate - 1.0%)

7) Free surface moisture: (A. Coarse aggregate - Nil (B. Fine aggregate - 2.2%

8) Sand confirms to Zone I grading.

Assume any other data required suitably.

10M

- 4. Design a M30 concrete mix using IS method of Mix Design for the following data:
 - 1) Maximum size of aggregate 20mm (Angular).

2) Degree of workability - 0.90 compaction factor.

3) Quality control - good 4) Type of exposure - severe

5) Specific Gravity: A. Cement - 3.10 B. Sand - 2.68 C. Coarse aggregate - 2.69

6) Water absorption: A. Coarse aggregate -1.0% B. Fine aggregate - 2.0%

7) Free surface moisture: A. Coarse aggregate- Nil B. Fine aggregate- 2.0%

8) Sand confirms to zone III grading.

Assume any other data required suitably

10M

5.]	Design a M40 concrete mix using	IS method of Mix Design for the following data:	
	1) Maximum size of aggregate	- 20mm (Angular).	
	2) Degree of workability	- 0.90 compaction factor.	
	3) Quality control	- good	
	4) Type of exposure	- severe	
	5) Specific Gravity: A. Cement	- 3.15 B. Sand - 2.68 C. Coarse aggregate - 2.71	
	6) Water absorption: A. Coars	se aggregate -1.0% B. Fine aggregate - 2.0%	
	7) Free surface moisture: A. C	Coarse aggregate- Nil B. Fine aggregate- 2.0%	
	8) Sand confirms to zone III grad	ding.	
	Assume any other data required	suitably	10M
6. a	a. Define the term "Mix Design o	f Concrete" and explain its significance.	5M
1	b. Briefly discuss various method	s of the mix design available in literature.	5M
7.	Brief explain about factors affecti	ng choice of mix design.	10M
8.]	Explain quality control of concret	e and durability of concrete.	10M
9.]	Explain the mix design procedure	of concrete as per IS code Method.	10M
10. a	a. What are the data used for ACI		2M
1	o. Define workability.		2M
(c. How is mixing operation is dor	ne in concrete.	2M
(d. List out the requirements of fre	sh concrete.	2M
(e. List out the usage of slump value	ues	2M

Siddharth Nagar, Narayanavanam Road — 517583

QUESTION BANK (DESCRIPTIVE)

Subject with Code : Concrete Technology (16CE118) Course & Branch: B.Tech - CE

Regulation: R16 Year & Sem: III B.Tech & I Sem

1	. a. What is light weight concrete? How is it produced?	4M
1.	b. What are the light weight aggregate concrete?	3M
	c. Explain workability scenario in light weight aggregate concrete?	3M
2.	2. Explain i) Cellular concrete ii) No-fineness concrete	5M
	iii)High density concrete iv) Fibre Reinforced concr	rete 5M
3.	8. a. What are different types of fibres used in the production of Fibre Reinford	rced concrete? 5M
	b. With respect Fibre Reinforced concrete explain following terms.	5M
	i) Aspect ratio ii) Percentage volume of fibre	
4.	a. What are various factors affecting properties of Fibre Reinforced concret	te? 5M
	b. Write applications of Fibre Reinforced concrete?	5M
5.	i. a. Explain polymer concrete?	5M
	b. Explain types of polymer concrete?	5M
6.	a. Explain properties of polymer concrete?	5M
	b. Explain application of polymer concrete?	5M
7.	7. Explain high performance concrete and what are the advantages of high pe	erformance concrete over
	conventional concrete?	10M
8.	3. What is self-consolidating concrete? What are the materials used for SCC?	10M
9.	Explain self-healing concrete and bacterial concrete?	5M
10	0. a. List some of the artificial light weight aggregate	2M
	b. Define light weight concrete.	2M
	c. Define high performance concrete	2M
	d. Define Admixtures	2M
	e. List different materials used for self-healing concrete.	2M

Subject with Code : Concrete Technology (16CE118) **Course & Branch**: B.Tech - CE

Year & Sem: III B.Tech & I Sem Regulation: R16

<u>UNIT –I</u>

1.	For quality control of Portland cement, the test essentially done is	[]
	A. setting time B. Soundness C. tensile strength D. All the above		
2.	Lower the normal consistency value,	[]
	A. Lower will be the strength of concrete B. Medium will be the strength of co	oncrete	
	C. Higher will be the strength of concrete D. None of the above		
3.	Under normal conditions using an ordinary cement, the period of removal of the form	n work,	
	is:	[]
	A. 7 days for beam soffits B. 14 days for bottom slabs of spans 4.6 m and mor	e	
	C. 21 days for bottom beams over 6 m spans D. All The Above		
4.	The mixture of different ingredients of cement, is burnt at	[]
	A. 1000°C B. 1200°C C. 1400°C D. 1900°C		
5.	Hydration of cement is due to chemical action of water with	[]
	A. Tricalcium silicate and dicalcium silicate		
	B. Dicalcium silicate and tricalcium aluminate		
	C. Tricalcium aluminate and tetra calcium alumino ferrite D. All the above.		
6.	The size of vicat needle, used to conduct setting of cement is	[]
	A. 10mm Dia B. 1mm Square C. 3mm Square D. 10 mm Dia	ì	-
7.	To obtain cement dry powder, lime stones and shales or their slurry, is burnt in a rota	ry kiln a	at a
	temperature between	ſ]
	A. 1100° and 1200°C B. 1200° and 1300°C C. 1300° and 1400°C D.1400° and 1500	°C	-
8.	Workability improved by adding	[]
	A. air-entraining agent B. foaming agent C. oily-agent D. all the above	L	-
9.	The commonly used material in the manufacture of cement is		
	A. sand stone B. Slate C. lime stone D. graphite.		
10.	Pick up the correct proportions of chemical ingredients of cement	[]
	A. Lime: Silica: Alumina: Iron oxide: 63: 22: 6: 3	L	-
	B. Silica: Lime: Alumina: Iron oxide: 63: 22: 6: 3		
	C. Alumina: Silica: Lime: Iron oxide: 63: 22: 6: 3		
	D. Iron oxide: Alumina: Silica: Lime: 63: 22: 6: 3		
11.	The high strength of rapid hardening cement at early stage, is due to its	[]
	A. finer grinding B. burning at high temperature	L	
	C. increased lime cement D. higher content of tricalcium.		
12.	Vicat's apparatus is used for	[]
	A. fineness test B. consistency test C. setting time test D. B and C	L	
13.	The rock which is not calcareous, is:	[1
	A. lime stone B. Macl C. Chalk D. Laterite	-	_

14. For road pavements, the cement generally used, is]]
A. ordinary Portland cement B. rapid hardening cement		
C. low heat cement D. blast furnace slag cement	_	-
15. Fine aggregates are the aggregates having the size less than:	[]
A. 5mm B. 4.75mm C. 3.50mm D. 2mm		
16. Choose the correct answer	[]
A. Cement color should not be greenish		
B. Smooth and gritty feeling when feel between the fingers		
C. The cement should not float when thrown in a bucket full of water		
D. None of the above		
16. The resistance of an aggregate to compressive forces is known as	[]
A. Crushing strength B. Impact value C. Shear resistance D. None of the about	ve	
17. For the improvement of workability of concrete, the shape of aggregate recommen	ded is	
A. Angular B. Round C. Flaky D. Irregular		
18. Determination of Moisture Content of aggregate by	[]
A. Drying method B. Displacement method		
C. Calcium Carbide method D. All of the above.		
19. Factors which promote alkali aggregate reaction are	[]
A. Reactive type of aggregate B. High alkali content		
C. Availability of Moisture D. All the above		
20. In concrete the fine aggregates is used to	[]
A. Fill up the voids in cement B. Fill up the voids in coarse aggregate		
C. Fill up the voids in sand D. All the above		
21. In Shape Test, the dimension of thickness gauge is calculated as	[]
A. 2.4 times the average of the size of retained and passing Sieve		
B. 1.2 times the average of the size of retained and passing Sieve		
C. 0.6 times the average of the size of retained and passing Sieve		
D. 1.8 times the average of the size of retained and passing Sieve		
22. Concrete is strong in	[]
A. Compression B. Tension C. Buckling D. Flexure		
23. In an ordinary portland cement, the composition of lime is	[]
A. 50% B. 63% C. 21% D. 33%		
24. In concrete the material used as a fine aggregate is	[]
A. Cement B. Sand C. jelly D. Gypsum		
25. Shrinkage of concrete develops	[]
A. spalling in concrete B. bends in concrete		
C. cracks in concrete D. Voids in concrete		
26. In concrete cube test, the standard size of cube is	[]
A. 15 cm x 15 cm x 15 cm B. 10 cm x 10 cm x 10 cm		
C. 25 cm x 25 cm x 25 cm D. None		
27. Approximate percentage range of CaO in OPC is	[]
A.50-60 B. 17- 25 C. 60 -67 D. 3- 8		
28. Approximate percentage range of Al ₂ O ₃ in OPC is	[]
A.17-25 B. 3-8 C. 3-10 D. 4-15		
29. Approximate percentage of SIO ₂ in OPC is	[]

A.50-60	B. 17- 25	C. 60 -67	D. 3-8		
30	number of grades avai	ilable in OPC		[]
A.1	B. 2	C. 3	D. None		
31. Which compound	d is liberates higher hea	ut		[]
$A.C_3S$	B. C_2S	C. C ₃ A	D. C ₄ AF		
32. Which compound	d is liberates lower heat	t		[]
$A.C_3S$	B. C_2S	C. C ₃ A	D. C ₄ AF		
33. In M20 concrete	M refers to			[]
A. Minimum	B. Maximum	C. Mix proportion	D. None		
34. At an early age g	reater strength contribu	ite compound is		[]
$A.C_3S$	B. C_2S	$C. C_3A$	D. C ₄ AF		
35. The role of gypsu	ım in cement is			[]
A. Accelerate set	ting process B. Ret	ard setting process	C. No affects D. N	Vone	
36. Least strength co	ntributes compounds is	S		[]
$A.C_3S$	B. C_2S	C. C ₃ A	D. C ₄ AF		
37. The size of the co	oarse aggregate is more	than		[]
A.1.16 mm	B. 2.36 mm	C. 4.75 mm	D. None		
38. The minimum 28	days' compressive stre	ength of 43 grade ceme	ent is	[]
A.23 MPa	B. 33 MPa	C. 40 MPa	D. 43 MPa		
39. The easiness of h	andling concrete is kno	own as		[]
A. Workability	B. Consistency	C. Hardness	D. None		
40. Device which is u	used to find out normal	consistency of cemen	t is	[]
A. Le – Chatelier	B. Permeability appar	ratus C. Vicat appa	aratus D. None		

Siddharth Nagar, Narayanavanam Road – 517583

QUESTION BANK (OBJECTIVE)

Subject with Code : Concrete Technology (16CE118) Course & Branch: B.Tech - CE

Year & Sem: III B.Tech & I Sem **Regulation:** R16

<u>UNIT –II</u>

1.	In rich mixes; use ofsize aggregate gives better results.	[]
	A. Larger B. Medium C. Smaller D. None		
2.	For given water content, workability decreases if the concrete aggregates	[]
	contain an excess of		
	A. thin particles B. elongated particles C. flaky particles D. all the abo	ve	
3.	For ensuring quality of concrete, use	[]
	A. single sized aggregates B. two sized aggregate		
	C. graded aggregates D. coarse aggregates		
4.	The standard sand now a days used in India, is obtained from	[]
	A. Jaipur B. Jullundur C. Hyderabad D. Ennore		
5.	The maximum amount of dust which may be permitted in aggregates is		
	A. 5% of the total aggregates for low workability with a coarse grading		
	B. 10% of the total aggregates for low workability with a fine grading		
	C. 20% of the total aggregates for a mix having high workability with fine grading		
	D. all the above.		
6.	The bulk density of aggregates does not depend upon:	[]
	A. size and shape of aggregates B. specific gravity of aggregates		
	C. grading of aggregates D. size and shape of the container		
7.	An aggregate is said to be flaky if its least dimension is less than	[]
	A. 1/5th of mean dimension B. 2/5th of mean dimension		
	C. 3/5th of mean dimension D. 4/5th of mean dimension		
8.	To ensure constant moisture content in aggregates	[]
	A. height of each aggregate pile should not exceed 1.50 m		
	B. aggregate pile should be left for 24 hours before aggregates are used		
	C. conical heaps of aggregates should be avoided to prevent moisture variation		
	D. all the above		
9.	For the construction of cement concrete floor, the maximum permissible		
	size of fine aggregate, is	[]
	A. 4.75 mm B. 6.23 mm C. 8.12 mm D. 10.50 mm		
10.	The process of proper and accurate measurement of concrete ingredients for		
	uniformity of proportion, is known	[]
	A. grading B. Curing C. Mixing D. Batching		
11.	Pick up the correct statement from the following:	[]
	A. Insufficient quantity of water makes the concrete mix harsh		
	B. Insufficient quantity of water makes the concrete unworkable		

C. Excess quantity of water makes the concrete segregated	
D. All the above	1
12. Slump test is done for	J
A. clay B. Sand C. lime D. concrete	1
13. Pick up the correct statement from the following:	J
A. The weight of ingredients of concrete mix, is taken in kilograms	
B. Water and aggregates are measured in litres	
C. 20 bags of cement make one tonne	
D. All the above	
14. Concrete mainly consists of]
A. cement B. Aggregates C. Admixture D. all the above	
15. Workability of concrete is measured by]
A. Vicat apparatus test B. Slump test	
C. Minimum void method D. Talbot Richard test	
16. Internal friction between the ingredients of concrete, is decreased by using []
A. less water B. fine aggregates	
C. rich mix D. more water and coarse aggregates	
17. The property of separation of cement paste from concrete while	
placing the concrete is called []
A. Compaction B. Segregation C. Bleeding D. Shrinkage	
18. To prevent segregation, the concrete should not be thrown from a height of more than []
A. 0.25m B. 0.5m C. 1.0m D. 1.5m	
19. Factors affecting Workability of concrete []
A Water Content B Mix Proportions	
C Size, Shape &Surface structure D All of the above	
20. Separation of the constituent materials of concrete is]
A Segregation B Bleeding C Workability D Vibration	
21. The height of the slump cone apparatus will be]
A 20cm B 25cm C 30cm D 35cm	
22. Wp and Wf are the weights of a cylinder containing partially compacted and	
fully compacted concrete. If the compaction factor is $\left(\frac{W_{P}}{}\right)$ 0.95, the workability	
of concrete is (w_f)]
A. extremely low B. very low C. Low D. High	
23. The risk of segregation is more for []
A. wetter mix B. larger proportion of maximum size aggregate	
C. coarser grading D. all the above	
24. The increased cohesiveness of concrete, makes it]
A. less liable to segregation B. more liable to segregation	
C. more liable to bleeding D. more liable for surface scaling in frosty weather	
25. Workability improved by adding []
A. air-entraining agent B. foaming agent C. oily-agent D. all the	above
26. Proper proportioning of concrete, ensures []
A. desired strength and workability B. desired durability	
C. water tightness of the structure D. all the above	

QUESTION BAN	K 20	18
27. Curing	Γ]
A. reduces the shrinkage of concrete B. preserves the properties of concrete	rete	J
C. prevents the loss of water by evaporation D. all of the above		
28. While compacting the concrete by a mechanical vibrator, the slump should not exce	ed []
A. 2.5 cm B.5.0 cm C. 7.5 cm D. 10 cm	•	_
29. Curing a concrete for long period ensures better	[]
A. volume stability B. Strength C. water resistance D. all the above	L	-
30. The factor which affects the design of concrete mix is	[]
A fineness modulus B water – cement ratio	_	,
C slump D all the above		
31. Commonly employed test for measurement of cement workability is	[]
A. Slump test B. Kelley bell test C. Vee Bee consists meter	L	D. All
32. Factors effecting the design of concrete mix is	[]
A fineness modulus B w/c C slump D all	_	,
33. Stripping time of vertical formwork to columns, walls and beams	[]
A 16-24 hrs B 12-16 hrs C 10-12 hrs D 8-10 hrs	-	-
34. In case of workable mixes, as per the Abrams Law the strength of concrete		
A Depends on water/cement ratio B Independent of water/cement ratio	[]
C Decreases with water/cement ratio D None of the above	-	-
35. As per IS Code method, the water cement ratio is calculated from	[]
A Target mean strength B Cement type C Both a and b D None		
36. In order to make concrete durable, the water cement ratio should be	[]
A High B Low C Moderate D None		
37. Shrinkage in concrete can be reduced by using	[]
A. low water cement ratio B. less cement in the concrete		
C. Both A & B D. None of the above		
38. In M20 Grade concrete, 20 indicates	[]
A. Compressive strength B. Tensile strength C. Mix D. None		
39. Hardening of cement occurs at	[]
A. rapid rate during the first few days and afterwards it continues to increase at a de	creased	l rate
B. slow rate during the first few days and afterwards it continues to increase at a rap	id rate	
C. uniform rate throughout its age		
D. none of these		
40. Effect of time on concrete workability is	[]
A. Increase workability as time passes B. Decrease workability as time pa	sses	
C. No effect D. None		

Siddharth Nagar, Narayanavanam Road – 517583

7.	The quality and strength of concrete in a		•	
	A. The concrete core test	B. The pull		
_	C. The Schmidt test hammer	D. All the al		
8.	In ultrasonic test for hardened concrete g			if the pulse velocity:
	A. below 3 km/s		bove 3.5 km/s	
_	C. Above 4.5 km/s		Ione of the above	1 6
9.	Specified compressive strength of concr			end of
4 -	A. 3 days B. 7 days	C. 14 days	D. 28 days	
1(). Slump test of concrete is a measure of it			D .
	A. consistency B. compressive streng	gtn	C. tensile strength	D. impact value.

11	. If the engineer-in-charge approve	es the 10 cm cube	may be u	sed for the worl	k test of	concrete
11.	provided maximum nominal size		•	sed for the work	K test of	Concrete
	A. 10 mm B. 15 mm	C. 20 mm		. 25 mm		
12	. Pick up the incorrect statement ap					
12.	A. When one thrusts one's hand in	-	_			
	B. The colour of the cement is blu	•	one snould	icei wariii		
	C. A handful of cement thrown in		should sink	immediately		
	D. All the above	to a backet of water	silouid silik	immediatery		
13	. An ordinary Portland cement whe	n tested for its finen	ess should	not leave any res	sidue on I	S sieve
13.	No. 9, more than	in tested for its inten	ess, siloulu	not reave any rea	orduc on r	.b. sieve
	A. 5% B. 10%	C. 15%	D	. 20%		
14.	The top diameter, bottom diamete					
	•	B. 10 cm, 30 cm, 20	-			
	, ,	D. 20 cm, 30 cm, 10				
15.	. Workability of concrete mix with	, , ,		nined by		
	•	B. slump test				
	_	D. none of these				
16.	. Pick up the incorrect statement f		For perform	ning compressiv	ve strengt	h test of
	cement		F	8F		
	A. cement and standard sand mort	tar are used in the ra	tio of 1: 3			
	B. water is added at the rate of			e P is the perce	ntage of v	vater for
	standard consistency	1 6		1	C	
	C. A cube mould of 10 cm x 10 cm	m x 10 cm is used				
	D. None of the above					
17.	. The lower water cement ratio in co	oncrete, introduces				
	A. smaller creep and shrinkage	B. greater de	nsity and sn	naller permeabil	ity	
	C. improved frost resistance	D. all the abo	ove.			
18.	. Separation of coarse aggregates fr	om mortar during tr	ansportation	, is known		
	A. bleeding B. Creeping	C. Segregation	on D	. Shrinkage		
19.	. Separation of water or water sand	cement from a fresh	ly concrete,	is known		
	A. bleeding B. Creeping	C. Segregation	on D	Shrinkage		
20.	. Shrinkage in concrete can be redu	ced by using				
	A. low water cement ratio	B. less cement in the	concrete			
	C. proper concrete mix	D. None				
21.	. Pick up the correct statement from	n the following:				
	A. According to the petrological of	characteristics, conc	ete aggrega	tes are classified	d as heavy	weight,
	normal weight and light weight					
	B. According to the shape of the	particles, concrete a	iggregates a	re classified as	rounded i	rregular,
	angular and flaky					
	C. According to the surface textur	-		iggregates are cl	lassified a	s glassy,
	smooth, granular, rough, crystallin	ne, honey combed ar	nd porous			
	D. All the above.					
22.	. The ratio between stress in steel to		-		[]
	A. Poisson's ratio B. Mod	dular ratio C. D	ensity ratio	D. None		

23. Select the Non – destructive test among the following A. Compression test B. Flexure test C. Rebound hammer test D. All	[]
24. The process of selecting suitable ingredients of concrete and determining their	ше	above
relative quantities can be called as	ſ	1
A. Mix design B. Specific gravity C. Compressive strength	-	None
25. Modulus of rupture of concrete is a measure ofstrength	[]
A. Split tensile B. Compressive C. Direct tensile D. Flexural tensile		
26. According to IS 456-2000, the modulus of elasticity of concrete Ec, can be taken as _ A. Ec = $570\sqrt{\text{fck}}$ B. 5700 fck C. $5700\sqrt{\text{fck}}$ D. $5000\sqrt{\text{fck}}$]
27. Increase in the moisture content in concrete	[]
A. Reduces the strength B. Increases the strength		
C. Does not change the strength D. All the above		
28. Modulus of elasticity of steel as per IS: 456—2000 shall be taken as	[]
A. 20kN/cm ² B. 200kN/cm ² C. 200kN/mm ² D. 2 X 106N/cm ²		
29. The factor of safety for concrete than steel	[]
A. Lower B. Higher C. Equal D. None		
30. According to Indian standards the grading of fine aggregate is divided into	[]
A. Two zones B. Four zones C. Five zones D. Three zone	es	
31. With the increase in rate of loading during testing compressive strength of concrete	[]
A. Increases B. Decreases C. Remains same D. None		
32. To determine the modulus of rupture the size of test specimen used is	[]
A. 150 X 150 X 500mm B. 100 X 100 X 700mm C. 150 X 150 X 700mm	D.	None
33. The ratio between stress in steel to that of stress in concrete in expressed as	[]
A. Poisson's ratio B. Modular ratio C. Density ratio D. None		-
	ſ	1
A. Compression test B. Flexure test C. Rebound hammer test D. All	the	above
35. The process of selecting suitable ingredients of concrete and determining		
their relative quantities can be called as	[]
A. Mix design B. Specific gravity C. Compressive strength		
36. The formula for determining the cement content is given by	[]
A. W/C ratio/ water content B. Water content /W/C ratio	L	J
C. Cement / W/C ratio D. All the above		
	г	1
37. According to India standards the coarse aggregate should conform to	[]
A. IS: 383 -70 B. IS: 381-70 C. IS: 382 -70 D. None		
38. Standard deviation can be calculated as	[]
A. $S = \sum x/n$ B. $S = \sqrt{\sum (x - \overline{x})^2/n-1}$ C. $S = \sum (x - \overline{x})^2/n$ D. No.	ne	
39. As per IS: 456-2000, the high strength concrete should have the characteristic		

			(QUESTION BA	ANK 20	018
strength of					[]
A. M40	B. M35	C. M65	D. All the a	above		
40. Maturity of co	oncrete is the prod	uct of			[]
A. Time	B. Velocity	C. Time	e & Temperature	D. None

QUESTION BANK (OBJECTIVE)

Subject with Code : Concrete Technology (16CE118) Course & Branch: B.Tech - CE

Year & Sem: III B.Tech & I Sem **Regulation:** R16

<u>UNIT –IV</u>

1.	The compaction of concrete, improves	[]
2	A. Density B. Strength C. Durability D. all the above.	г	1
2.	Segregation is responsible for]
	A. honey-combed concrete B. porous layers in concrete		
_	C. surface scaling in concrete D. sand streaks in concrete	_	_
3.	Addition of pozzolana to cement	[]
	A. decreases workability B. increases strength		
	C. increases heat of hydration D. Increase workability		
4.	Permissible compressive strength of M 150 concrete grade is	[]
	A. 100 kg/cm^2 B. 150 kg/cm^2 C. 200 kg/cm^2 D. 250	kg/cm2	2
5.	Pozzolana cement is used with confidence for construction of	[]
	A. dams B. massive foundations C. Abutments D. R.C.C. structures		
6.	Efflorescence in cement is caused due to an excess of	[]
	A. Alumina B. iron oxide C. Magnesium Oxide D. alkalis		
7.	The diameter of the Vicat plunger is 10 mm and its length varies from	[]
	A. 20 mm to 30 mm B. 30 mm to 40 mm C. 40 mm to 50 mm D. 50 mm to 60	0 mm	
8.	The ratio of various ingredients (cement, sand, aggregates) in concrete of grade M 20,	is []
	A. 1: 2: 4 B. 1: 3: 6 C. A & B D. None of the Above		
9.	Tricalcium aluminate	[]
	A. reacts fast with water B. generates less heat of hydration		
	C. causes initial setting and early strength of cement		
	D. does not contribute to develop ultimate strength		
10.	-	[1
	A. depends upon the amount of water used in the mix	L	•
	B. does not depend upon the quality of cement mixed with aggregates		
	C. does not depend upon the quantity of cement mixed with aggregates		
	D. all the above		
11	Pick up the correct statement from the following:	[1
11.	A. High percentage of C ₃ S and low percentage of C ₂ S cause rapid hardening	L	1
	B. High percentage of C ₃ S and low percentage of C ₂ S make the cement less resistiv	e to ch	emical
	attack	c to cn	Cilicai
	C. Low percentage of C ₃ S and high percentage of C ₂ S contribute to slow hardening		
	D. None		
12		ſ	1
12.	The factor which affects workability, is	L	1
	A. water content and its temperature B. shape and size of the aggre	gaies	

C. grading and surface textures of the aggregates D. air entraining agents 13. The cement whose strength is a little lower than the ordinary cement during the		
first three months but attains afterwards the same strength, is known as A. low-heat Portland cement B. rapid hardening Portland cement	[]
C. Portland blast slag cement D. none of these		
14. Pick up the correct statement from the following:	[]
A. Water enables chemical reaction to take place with cement	_	-
B. Water lubricates the mixture of gravel, sand and cement		
C. Only a small quantity of water is required for hydration of cement		
D. Strength of concrete structure largely depends upon its workability		
15. Pick up the correct statement from the following:	[1
A. Calcium chloride acts as a retarder B. Gypsum acts as a retarder	_	-
C. Calcium chloride acts as an accelerator D. Both C. and D.		
16. Joints in concrete structures, are provided	ſ	1
A. to reduce the tensile stresses likely to be developed due to evaporation of water	_	
B. to minimize the change in the dimensions of the slab		
C. to minimize the necessary cracking D. all the above.		
17. High temperature	ſ	1
A. increases the strength of concrete B. decreases the strength of	concrete	,
C. has no effect on the strength of concrete D. none of these.		
18. The bulk density of aggregates, is generally expressed as	ſ	1
A. tonnes/cubic meter B. kg/cubic meter C. kg/liter D. g/cm3	_	-
19. The grade of concrete M 150 means that compressive strength of a 15 cm cube		
after 28 days, is	[1
A. 100 kg/cm2 B. 150 kg/cm2 C. 200 kg/cm2 D. 250 kg/cm	n2	
20. According to IS 456-2000, the modulus of elasticity of concrete Ec, can be taken as	[1
A. Ec = $570\sqrt{\text{fck}}$ B. 5700 fck C. $5700\sqrt{\text{fck}}$ D. $5000\sqrt{\text{fck}}$	_	-
21. Increase in the moisture content in concrete	ſ	1
	-	-
A. Reduces the strength B. Increases the strength		
A. Reduces the strength C. Does not change the strength D. All the above		
C. Does not change the strength D. All the above	ſ	1
C. Does not change the strength D. All the above 22. Modulus of rupture of concrete is a measure of	[]
C. Does not change the strength D. All the above 22. Modulus of rupture of concrete is a measure of A. Split tensile strength B. Compressive strength	[]
C. Does not change the strength D. All the above 22. Modulus of rupture of concrete is a measure of A. Split tensile strength B. Compressive strength C. Direct tensile strength D. Flexural tensile strength	[]
C. Does not change the strength D. All the above 22. Modulus of rupture of concrete is a measure of A. Split tensile strength B. Compressive strength	[]
C. Does not change the strength D. All the above 22. Modulus of rupture of concrete is a measure of A. Split tensile strength B. Compressive strength C. Direct tensile strength D. Flexural tensile strength 23. The relation between modulus of rupture for and characteristic strength of concrete fck is given by	[]
 C. Does not change the strength D. All the above 22. Modulus of rupture of concrete is a measure of	[]
 C. Does not change the strength D. All the above 22. Modulus of rupture of concrete is a measure of	[]
 C. Does not change the strength D. All the above 22. Modulus of rupture of concrete is a measure of	[5√fck []] cm ²
 C. Does not change the strength D. All the above 22. Modulus of rupture of concrete is a measure of	[5√fck []
 C. Does not change the strength D. All the above 22. Modulus of rupture of concrete is a measure of	[5√fck [X 106N/o]] cm ²
 C. Does not change the strength D. All the above 22. Modulus of rupture of concrete is a measure of	[5√fck [X 106N/o] [] [] [] [] [] []
 C. Does not change the strength D. All the above 22. Modulus of rupture of concrete is a measure of	[5√fck [X 106N/0 [5,[] [] [] [] [] [] []
 C. Does not change the strength D. All the above 22. Modulus of rupture of concrete is a measure of	[5√fck [X 106N/o [5,[] [] [] [] [] [] []

28.	With the increase in rate of loading during testing compressive strength of concrete _	[]
	A. Increases B. Decreases C. Remains same D. None	
29.	To determine the modulus of rupture the size of test specimen used is	[]
	A. 150 X 150 X 500mm B. 100 X 100 X 700mm C. 150 X 150 X 700mm	D. None
30.	The ratio between stress in steel to that of stress in concrete in expressed as	[]
	A. Poisson's ratio B. Modular ratio C. Density ratio D. None	
31.	Select the Non – destructive test among the following	[]
	A. Compression test B. Flexure test C. Rebound hammer test D. All the	he above
13.	The process of selecting suitable ingredients of concrete and determining their	
	relative quantities can be called as	[]
	a) Mix design B. Specific gravity C. Compressive strength	D. None
32.	The formula for determining the cement content is given by	[]
	A. W/C ratio/ water content B. Water content /W/C ratio	
	C. Cement / W/C ratio D. All the above	
33.	According to India standards the coarse aggregate should conform to	[]
	A. IS: 383 -70 B. IS: 381-70 C. IS: 382 -70 D. None	
34.	Standard deviation can be calculated as	[]
	A. $S = \sum x/n$ B. $S = \sqrt{\sum (x - x)^2/n-1}$ C. $S = \sum (x - x)^2/n$ D. None	e
35.	As per IS: 456-2000, the high strength concrete should have the	
	characteristic strength of	[]
	A. M40 B. M35 C. M65 D. All the above	
36.	Maturity of concrete is the product of	[]
	A. Time B. Velocity C. Time & Temperature D. None	
37.	The characteristic strength of M50 concrete is	[]
	A. 40 N/ mm2 B. 60 N /mm2 C. 50 N /mm2 D. 30 N /mm2	
38.	The cylindrical strength of concrete is times the strength of the cube	[]
	A. 10 B. 1.5 C. 0.8 D. 8	
39.	The ratio of various ingredients (cement, sand, aggregates) in concrete of grade M 25,	[]
	A. 1: 1: 2 B. 1: 3: 6 C. A & B D. None of the Above	
40.	The ratio of various ingredients (cement, sand, aggregates) in concrete of grade M 10,	[]
	A 1 · 2 · 4 B 1 · 4 · 8 C A & B D None of the Above	

Siddharth Nagar, Narayanavanam Road – 517583

QUESTION BANK (OBJECTIVE)

Subject with Code : Concrete Technology (16CE118) Course & Branch: B.Tech - CE

Year & Sem: III B.Tech & I Sem **Regulation:** R16

$\underline{UNIT-V}$

1. T	The characteristic strength of M ₅₀ concrete is	[]
A	A. 40 N/ mm ² B. 60 N /mm ² C. 50 N /mm ² D. 30 N /mm ²		
2. Th	ne cylindrical strength of concrete is times the strength of the cube	[]
A	A. 10 B. 1.5 C. 0.8 D. 8		
3. V	Wp and Wf are the weights of a cylinder containing partially compacted and		
	fully compacted concrete. If the compaction factor is $(\underline{W_P})$ 0.95, the workability		
	of concrete is $\binom{w_f}{}$	[]
A	A. extremely low B. very low C. Low D. High		
4. T	The risk of segregation is more for	[]
A	A. wetter mix B. larger proportion of maximum size aggregate		
(C. coarser grading D. all the above		
5. T	The increased cohesiveness of concrete, makes it	[]
A	A. less liable to segregation B. more liable to segregation		
(C. more liable to bleeding D. more liable for surface scaling in frosty weather		
6. V	Workability improved by adding	[]
A	A. air-entraining agent B. foaming agent C. oily-agent D. all t	he abov	ve
7. P	Proper proportioning of concrete, ensures	[]
A	A. desired strength and workability B. desired durability		
(C. water tightness of the structure D. all the above		
8. (Curing	[]
A	A. reduces the shrinkage of concrete B. preserves the properties of concrete	e	
(C. prevents the loss of water by evaporation D. all of the above		
	While compacting the concrete by a mechanical vibrator, the slump should not exceed	l []
A	A. 2.5 cm B.5.0 cm C. 7.5 cm D. 10 cm		
10. C	Curing a concrete for long period ensures better	[]
	A. volume stability B. Strength C. water resistance D. all the above		
	The factor which affects the design of concrete mix is	[]
	A fineness modulus B water – cement ratio		
	C slump D all the above		
	Commonly employed test for measurement of cement workability is	[]
	A. Slump test B. Kelley bell test C. Vee consists meter	D. All	
	Slump test is done for	[]
	A. clay B. Sand C. lime D. concrete		

Concrete Technology (16CE118)

14. Pick up the correct statement from the following: A. The weight of ingredients of concrete mix, is taken in kilograms B. Water and aggregates are measured in liters C. 20 bags of cement make one tonne D. All the above 15. Concrete mainly consists of A. cement B. Aggregates C. Admixture D. all the above 16. Workability of concrete is measured by A. Vicat apparatus test B. Slump test C. Minimum void method D. Talbot Richard test 17. Internal friction between the ingredients of concrete, is decreased by using A. less water B. fine aggregates C. rich mix D. more water and coarse aggregates 18. The property of separation of cement paste from concrete while placing the concrete is called A. Compaction B. Segregation C. Bleeding D. Shrinkage 19. To prevent segregation, the concrete should not be thrown from a height of more than [A. 0.25m B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete A Water Content B Mix Proportions C Size, Shape &Surface structure D All of the above 21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above 22. Segregation is responsible for A. honey-combed concrete B. porous layers in concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability C. increases heat of hydration D. Increase workability 4. Permissible compressive strength of M 150 concrete grade is
A. The weight of ingredients of concrete mix, is taken in kilograms B. Water and aggregates are measured in liters C. 20 bags of cement make one tonne D. All the above 15. Concrete mainly consists of A. cement B. Aggregates C. Admixture D. all the above 16. Workability of concrete is measured by A. Vicat apparatus test B. Slump test C. Minimum void method D. Talbot Richard test 17. Internal friction between the ingredients of concrete, is decreased by using A. less water B. fine aggregates C. rich mix D. more water and coarse aggregates 18. The property of separation of cement paste from concrete while placing the concrete is called A. Compaction B. Segregation C. Bleeding D. Shrinkage 19. To prevent segregation, the concrete should not be thrown from a height of more than [A. 0.25m] B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete A Water Content B Mix Proportions C Size, Shape &Surface structure D All of the above 21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above 22. Segregation is responsible for A. honey-combed concrete B. porous layers in concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
B. Water and aggregates are measured in liters C. 20 bags of cement make one tonne D. All the above 15. Concrete mainly consists of A. cement B. Aggregates C. Admixture D. all the above 16. Workability of concrete is measured by A. Vicat apparatus test B. Slump test C. Minimum void method D. Talbot Richard test 17. Internal friction between the ingredients of concrete, is decreased by using A. less water B. fine aggregates C. rich mix D. more water and coarse aggregates 18. The property of separation of cement paste from concrete while placing the concrete is called A. Compaction B. Segregation C. Bleeding D. Shrinkage 19. To prevent segregation, the concrete should not be thrown from a height of more than [A. 0.25m B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete A Water Content B Mix Proportions C Size, Shape &Surface structure D All of the above 21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above 22. Segregation is responsible for A. honey-combed concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
C. 20 bags of cement make one tonne 15. Concrete mainly consists of
15. Concrete mainly consists of A. cement B. Aggregates C. Admixture D. all the above 16. Workability of concrete is measured by A. Vicat apparatus test B. Slump test C. Minimum void method D. Talbot Richard test 17. Internal friction between the ingredients of concrete, is decreased by using A. less water B. fine aggregates C. rich mix D. more water and coarse aggregates 18. The property of separation of cement paste from concrete while placing the concrete is called A. Compaction B. Segregation C. Bleeding D. Shrinkage 19. To prevent segregation, the concrete should not be thrown from a height of more than [A. 0.25m B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete A Water Content B Mix Proportions C Size, Shape &Surface structure D All of the above 21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above 22. Segregation is responsible for A. honey-combed concrete B. porous layers in concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
A. cement B. Aggregates C. Admixture D. all the above 16. Workability of concrete is measured by [] A. Vicat apparatus test B. Slump test C. Minimum void method D. Talbot Richard test 17. Internal friction between the ingredients of concrete, is decreased by using [] A. less water B. fine aggregates C. rich mix D. more water and coarse aggregates 18. The property of separation of cement paste from concrete while placing the concrete is called [] A. Compaction B. Segregation C. Bleeding D. Shrinkage 19. To prevent segregation, the concrete should not be thrown from a height of more than [] A. 0.25m B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete A Water Content B Mix Proportions C Size, Shape &Surface structure D All of the above 21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for A. honey-combed concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increase heat of hydration D. Increase workability
16. Workability of concrete is measured by A. Vicat apparatus test B. Slump test C. Minimum void method D. Talbot Richard test 17. Internal friction between the ingredients of concrete, is decreased by using A. less water B. fine aggregates C. rich mix D. more water and coarse aggregates 18. The property of separation of cement paste from concrete while placing the concrete is called A. Compaction B. Segregation C. Bleeding D. Shrinkage 19. To prevent segregation, the concrete should not be thrown from a height of more than [A. 0.25m B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete A Water Content B Mix Proportions C Size, Shape &Surface structure D All of the above 21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above 22. Segregation is responsible for A. honey-combed concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
A. Vicat apparatus test C. Minimum void method D. Talbot Richard test 17. Internal friction between the ingredients of concrete, is decreased by using A. less water B. fine aggregates C. rich mix D. more water and coarse aggregates 18. The property of separation of cement paste from concrete while placing the concrete is called A. Compaction B. Segregation C. Bleeding D. Shrinkage 19. To prevent segregation, the concrete should not be thrown from a height of more than [A. 0.25m B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete A Water Content C Size, Shape &Surface structure D All of the above 21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for A. honey-combed concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability C. increases workability C. increases workability C. increases workability
C. Minimum void method D. Talbot Richard test 17. Internal friction between the ingredients of concrete, is decreased by using A. less water B. fine aggregates C. rich mix D. more water and coarse aggregates 18. The property of separation of cement paste from concrete while placing the concrete is called A. Compaction B. Segregation C. Bleeding D. Shrinkage 19. To prevent segregation, the concrete should not be thrown from a height of more than [A. 0.25m B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete B. Mix Proportions C. Size, Shape & Surface structure D. All of the above 21. The compaction of concrete, improves [A. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for [B. porous layers in concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
17. Internal friction between the ingredients of concrete, is decreased by using A. less water B. fine aggregates C. rich mix D. more water and coarse aggregates 18. The property of separation of cement paste from concrete while placing the concrete is called A. Compaction B. Segregation C. Bleeding D. Shrinkage 19. To prevent segregation, the concrete should not be thrown from a height of more than [A. 0.25m B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete A Water Content B Mix Proportions C Size, Shape & Surface structure D All of the above 21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for A. honey-combed concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
A. less water
C. rich mix D. more water and coarse aggregates 18. The property of separation of cement paste from concrete while placing the concrete is called A. Compaction B. Segregation C. Bleeding D. Shrinkage 19. To prevent segregation, the concrete should not be thrown from a height of more than [A. 0.25m B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete A Water Content B Mix Proportions C Size, Shape &Surface structure D All of the above 21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for A. honey-combed concrete B. porous layers in concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
18. The property of separation of cement paste from concrete while placing the concrete is called A. Compaction B. Segregation C. Bleeding D. Shrinkage 19. To prevent segregation, the concrete should not be thrown from a height of more than [A. 0.25m B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete A Water Content B Mix Proportions C Size, Shape & Surface structure D All of the above 21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for A. honey-combed concrete B. porous layers in concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
placing the concrete is called A. Compaction B. Segregation C. Bleeding D. Shrinkage 19. To prevent segregation, the concrete should not be thrown from a height of more than [A. 0.25m B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete A Water Content B Mix Proportions C Size, Shape & Surface structure D All of the above 21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for A. honey-combed concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
A. Compaction B. Segregation C. Bleeding D. Shrinkage 19. To prevent segregation, the concrete should not be thrown from a height of more than [A. 0.25m B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete B. Mix Proportions C. Size, Shape & Surface structure D. All of the above 21. The compaction of concrete, improves [J. A. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for [J. A. honey-combed concrete B. porous layers in concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement [J. A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
19. To prevent segregation, the concrete should not be thrown from a height of more than [A. 0.25m B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete B Mix Proportions C Size, Shape & Surface structure D All of the above 21. The compaction of concrete, improves [Jan. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for [Jan. honey-combed concrete B. porous layers in concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
A. 0.25m B. 0.5m C. 1.0m D. 1.5m 20. Factors affecting Workability of concrete A Water Content B Mix Proportions C Size, Shape &Surface structure D All of the above 21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for A. honey-combed concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
20. Factors affecting Workability of concrete A Water Content C Size, Shape &Surface structure D All of the above 21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for A. honey-combed concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
A Water Content C Size, Shape &Surface structure D All of the above 21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for A. honey-combed concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
C Size, Shape &Surface structure D All of the above 21. The compaction of concrete, improves [] A. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for [] A. honey-combed concrete B. porous layers in concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement [] A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
21. The compaction of concrete, improves A. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for A. honey-combed concrete B. porous layers in concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
A. Density B. Strength C. Durability D. all the above. 22. Segregation is responsible for [] A. honey-combed concrete B. porous layers in concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement [] A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
22. Segregation is responsible for A. honey-combed concrete B. porous layers in concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
A. honey-combed concrete C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability C. increases heat of hydration B. porous layers in concrete D. All the above [] B. increases strength D. Increase workability
C. surface scaling in concrete D. All the above 23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
23. Addition of pozzolana to cement A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
A. decreases workability B. increases strength C. increases heat of hydration D. Increase workability
C. increases heat of hydration D. Increase workability
24. Permissible compressive strength of M 150 concrete grade is
A. 1000 kg/cm^2 B. 1500 kg/cm^2 C. 2000 kg/cm^2 D. 2500 kg/cm^2
25. Pozzolana cement is used with confidence for construction of []
A. dams B. massive foundations C. Abutments D. R.C.C. structures
26. Efflorescence in cement is caused due to an excess of []
A. Alumina B. iron oxide C. Magnesium Oxide D. alkalis
27. The diameter of the Vicat plunger is 10 mm and its length varies from []
A. 20 mm to 30 mm B. 30 mm to 40 mm C. 40 mm to 50 mm D. 50 mm to 60 mm
28. Tricalcium aluminate []
A. reacts fast with water B. generates less heat of hydration
C. causes initial setting and early strength of cement
D. does not contribute to develop ultimate strength
29. According to Water-Cement Ratio Law, the strength of workable plastic concrete [
A. depends upon the amount of water used in the mix
B. does not depend upon the quality of cement mixed with aggregates
C. does not depend upon the quantity of cement mixed with aggregates D. all the above

30. Pick up the correct statement from the following: A. High percentage of C ₃ S and low percentage of C ₂ S cause rapid hardening	[]
B. High percentage of C ₃ S and low percentage of C ₂ S make the cement less resisti attack	ve to ch	nemical
C. Low percentage of C ₃ S and high percentage of C ₂ S contribute to slow hardening D. None		
31. The factor which affects workability, is	ſ]
A. water content and its temperature B. shape and size of the aggr	egates	-
C. grading and surface textures of the aggregates D. All the above	C	
32. The cement whose strength is a little lower than the ordinary cement during the		
first three months but attains afterwards the same strength, is known as	[]
A. low-heat Portland cement B. rapid hardening Portland cement		
C. Portland blast slag cement D. none of these		
33. Pick up the correct statement from the following:	[]
A. Water enables chemical reaction to take place with cement		
B. Water lubricates the mixture of gravel, sand and cement		
C. Only a small quantity of water is required for hydration of cement		
D. Strength of concrete structure largely depends upon its workability		
34. Pick up the correct statement from the following:	[]
A. Calcium chloride acts as a retarder B. Gypsum acts as a retarder		
C. Calcium chloride acts as an accelerator D. Both C. and D.		
35. Joints in concrete structures, are provided	[]
A. to reduce the shrinkage cracks likely to be developed due to evaporation of water		
B. to minimize the change in the dimensions of the slab		
C. to minimize the necessary cracking D. all the above.		
36. High temperature	[]
A. increases the strength of concrete B. decreases the strength of concrete	concrete	:
C. has no effect on the strength of concrete D. none of these.		
37. The bulk density of aggregates, is generally expressed as	[]
A. tonnes/cubic meter B. kg/cubic meter C. kg/liter D. g/cm ³		
38. Determination of Moisture Content of aggregate by	[]
A. Drying method B. Displacement method		
C. Calcium Carbide method D. All of the above.		
39. Factors which promote alkali aggregate reaction are	[]
A. Reactive type of aggregate B. High alkali content		
C. Availability of Moisture D. All the above		
40. In concrete the fine aggregates is used to	[]
A. Fill up the voids in cement B. Fill up the voids in coarse aggregate		
C. Fill up the voids in sand D. All the above		
41. To produce impermeable concrete	[]
A. properly graded and non-porous aggregates are required		
B. proper compaction of concrete is required		
C. Both A & B D. None of the Above		

42. Identify the incorrect statement	[]
A. The testing of representative concrete does not give the quality of actual in-place	concret	e.
B. Quality control can be exercised by testing three concrete cubes at 28 days		
C. The quality control is carried out much before any cube becomes available for tes	ting	
D. None of the above		-
43. The concept of performance oriented specifications suffers due to difficulty in	L]
A. Defining what constitutes satisfactory performance		
B. Setting appropriate performance limits		
C. All the above		
D. None of the above	г	1
44. Which of the fallowing statements are incorrect?		J
A. uniform workability ensures uniform strength		
B. The ball penetration test can be performed on concrete as placed in the forms		
C. Both A & B		
D. Vee-bee test is suitable for low and very low workability's	r	1
45. The permissible variation in compacting factor measurement is A. ±25mm B. One-third of the required value]
1		
C. 0.07 for C.F. values below 0.7 D. None of the above	F	1
46. The cement content in a sample of fresh concrete can be determined by	[]
A. rapid analysis machine B. EDTA titration method		
C. accelerated strength method D. None of the above	r	1
47. The quality and strength of concrete in a structure can be assessed by	L	J
A. The concrete core test C. The Schmidt test hammer B. The pull out test D. All the above		
	laa wala	oity is
48. In ultrasonic test for hardened concrete good quality of concrete is indicated if the put. A. below 3 km/s B. above 3.5 km/s	ise veio	city is
C. Above 4.5 km/s D. None of the above		
49. Specified compressive strength of concrete is obtained from cube tests at the end of	г	1
A. 3 days B. 7 days C. 14 days D. 28 days	L	J
50. Slump test of concrete is a measure of its	Γ	1
•	pact val	lue.
51. If the engineer-in-charge approves, the 10 cm cubes may be used for the work t	-	
provided maximum nominal size of aggregate, does not exceed	ſ	1
A. 10 mm B. 15 mm C. 20 mm D. 25 mm	_	-
52. Pick up the incorrect statement applicable to the field test of good cement.	[]
A. When one thrusts one's hand into a bag of cement, one should feel warm		
B. The colour of the cement is bluish		
C. A handful of cement thrown into a bucket of water should sink immediately		
D. All the above		
53. An ordinary Portland cement when tested for its fineness, should not leave any resid	ue on I.	S. sieve
No. 9, more than	[]
A. 5% B. 10% C. 15% D. 20%		
54. The top diameter, bottom diameter and the height of a slump mould are:	[]
A. 10 cm, 20 cm, 30 cm B. 10 cm, 30 cm, 20 cm		
Concrete Technology (16CE118)		

	QUESTION BANK	201	8
C. 20 cm, 10 cm, 30 cm	D. 20 cm, 30 cm, 10 cm		
55. Workability of concrete mix w	ith low water cement ratio is determined by []
A. tensile strength test	B. slump test		
C. compaction factor test	D. none of these		
56. Pick up the incorrect stateme	nt from the following. For performing compressive str	ength	test of
cement	[]
A. cement and standard sand i	mortar are used in the ratio of 1: 3		
B. water is added at the rate of	of + 3.0 percentage of water where P is the percentage	of wa	ater for
standard consistency			
C. A cube mould of 10 cm x 1	0 cm x 10 cm is used		
D. None of the above			
57. The lower water cement ratio i	n concrete, introduces []
A. smaller creep and shrinkag	B. greater density and smaller permeability		
C. improved frost resistance	D. all the above.		
58. Separation of coarse aggregate	s from mortar during transportation, is known []
A. bleeding B. Creeping	g C. Segregation D. Shrinkage		
59. Separation of water or water sa	nd cement from a freshly concrete, is known		1

C. Segregation

B. less cement in the concrete

D. None

Prepared by: **R RAJESH KUMAR**

D. Shrinkage

A. bleeding

B. Creeping

60. Shrinkage in concrete can be reduced by using

A. low water cement ratio

C. proper concrete mix
